

AnyDoc®

EXCHANGE *it*

Accurately convert data from one application to another with ease

Where data meets destination

Automatically, on your schedule and in your format.

Data. It drives every business decision. To grow, to innovate, businesses need accurate data that moves from origination to destination—through your business systems—fast. Your decision makers need current, flawless information to move the company forward.

If you use OCR for AnyDoc® to automatically capture and process documents and data, EXCHANGEit™ is the ideal tool for moving data files and documents to your backend applications. Through a drag-and-drop interface, you can bridge incompatible formats, transfer files on the fly or automate transport to occur at the best time for your business practices and infrastructure.

Using OCR for AnyDoc and EXCHANGEit, your organization can rapidly consolidate information from a myriad of sources. Your business decisions will be based on current, easily-accessible information, regardless of your data's original format.

With EXCHANGEit you can:

- » Automate data transfer according to your schedule
- » Eliminate the need for a file conversion program
- » Retrieve from most data formats
- » Link to external databases
- » Drag & drop from your source data to destination data
- » Move data and images to document management/ERP/backoffice systems
- » Interface with 835 and 837 EDI format (EOBs and HCFAs)
- » Attach VBScript to validate information with your rules and provide added flexibility
- » Review and correct exceptions that occur during data transfer without rerunning an entire job

Goodbye

Time-intensive programming and testing. Incompatible data formats. And manually initiated processes.

Hello

Quick matching of source data to destination (database, document management system, ERP system, back office application, etc.) —and timely processing of data into decision-making tools.

IT manager:

“EXCHANGEit eliminated the manual process of converting data file formats, as well as moving those files into our backend system. It saves us time and money.”

Key Features

- » **Easy-to-use features drastically increase efficiency**

Tasks that once required hours of programming can now be completed in a matter of minutes through the powerful, easy-to-use GUI.

- » **Simple point-and-click mapping**

Both source and destination fields are simultaneously displayed along with all the data transfer details including source, path, filters, and destinations. Just drag and drop to select and match database fields between source and destination.

- » **Time saver: intelligent scheduling**

With intelligent scheduling you can arrange data transfers to run by the hour, day, week or month. EXCHANGEit can also continuously look into target directories for new data to process throughout the day or night.

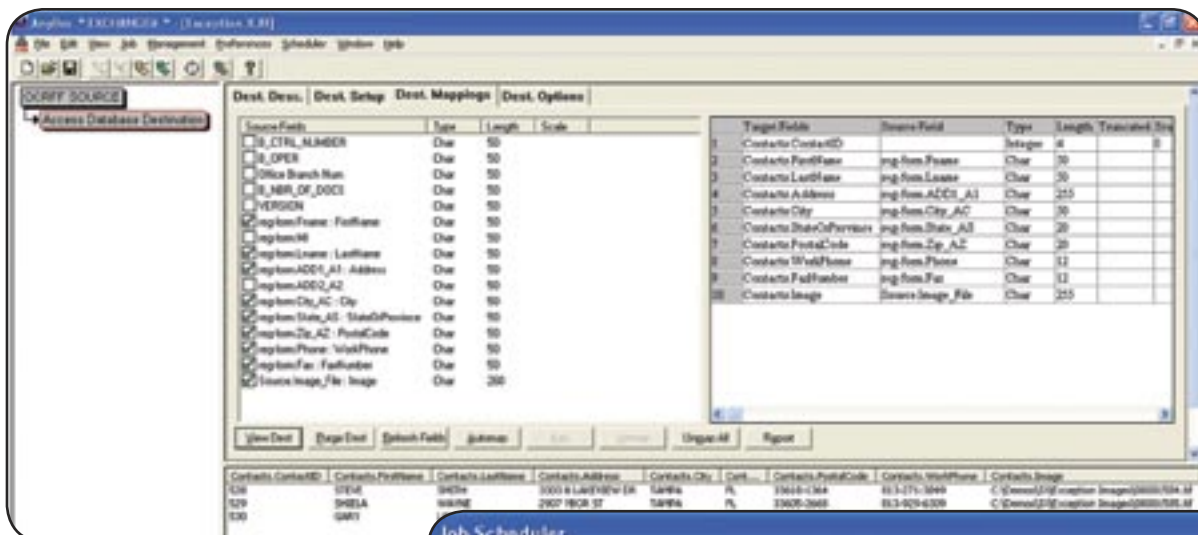

- » **Multiple sources**

Multiple sources are available through data-links created within EXCHANGEit, where source files are logically joined together by using the simple drag-and-drop “data-link” option. This allows you to work with both new data and the data in your back office systems.

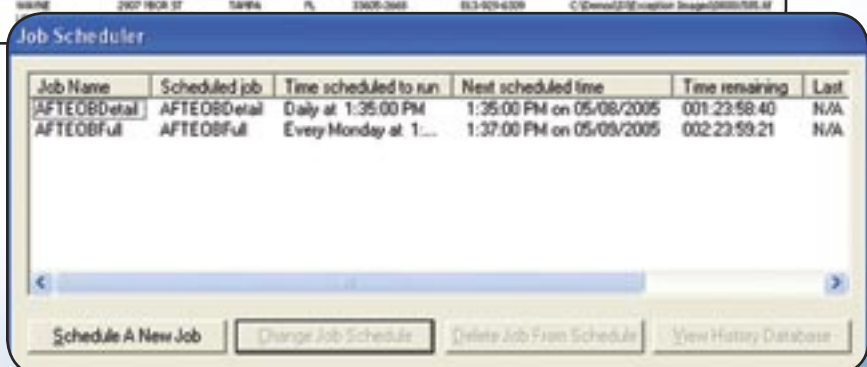

Financial analyst:

“Thanks to EXCHANGEit, I have the current financial information to work with every morning. This provides us with a competitive edge.”

Data fields are easily mapped to destination positions in back end applications with simple drag-n-drop activity. Detail views of the source and destination data values allow for easy clarification of data labels during mapping.

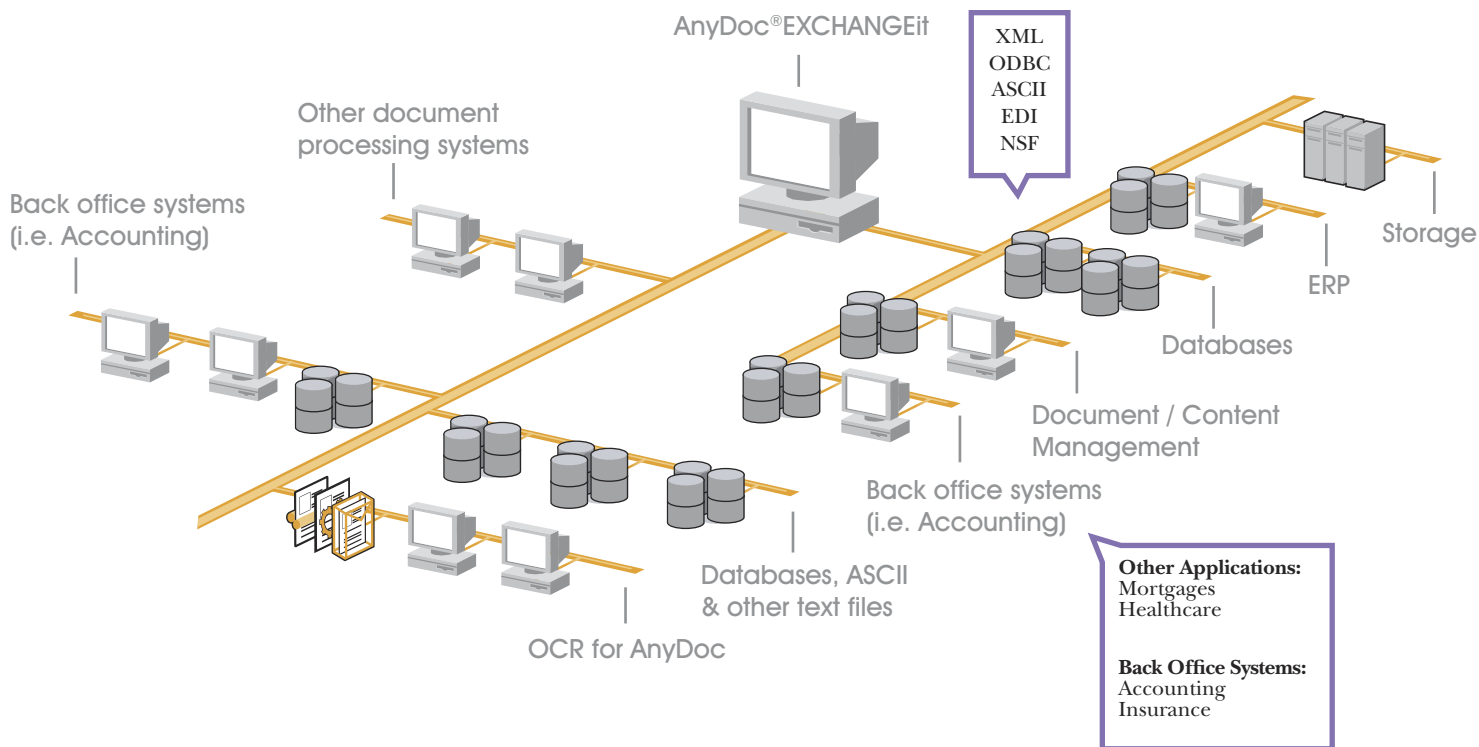

Separate jobs can be scheduled to run at any time during attended or unattended sessions, increasing productivity by moving data into your back end systems in the quickest of fashions.

AnyDoc®

EXCHANGEit

Automation Process Diagram

Acting as the center of compatibility between data sources and the backend applications across your IT infrastructure, EXCHANGEit facilitates data flow. Tasks that once required days of programming can now be completed by virtually anyone, using a simple drag-and-drop interface.

Gain a powerful edge throughout your organization.

Easily export important data to other applications. EXCHANGEit will transfer all your captured images and data from OCR for AnyDoc into databases, storage and retrieval systems or Electronic Data Interchange (EDI) standards using a simple point-and-click interface. You can even schedule work to run without the need for supervision. Any exceptions are routed for correction while the rest of the work flows through unattended.

Key Features (con't)

- » **EDI destinations**
EDI 835 (EOB) and 837 (HCFA) formats assist in backend system integration.
- » **Threshold monitoring**
Error thresholds can be set for all destination applications. A job stops whenever a pre-determined threshold is met.
- » **Exception handling**
The exception handler logs errors that occur during information processing between the source and destination files, allowing for easy and timely review of any issues occurring during transfer.
- » **Exception handler screen**
The exception handler screen groups exceptions by job for your review and provides the option to edit data. Corrected data is then processed without re-starting the entire information transfer job.

- » **VBScript flexibility**
VBScript can be attached to sources and links. Data can be manipulated in records by performing mathematical calculations, manually changing the data, skipping records, creating new field values based on source or link information, and by testing the data for logical relationships.
- » **Pre-defined file format**
Convert your processed data into one of the many pre-defined formats for proper export into other backend systems, or define your own format.
- » **Scheduler**
Schedule jobs to run automatically at a time and frequency which best enhance your production environment or coincide with the availability of your source and destinations. Be confident that your data (and images) are being delivered to your attended or unattended back end systems and in a timely manner.

Sources & Destinations

Available source file types:

- » OCR for AnyDoc .GTO files - (Generic Text Output File)
- » Microsoft® Access database .MDB files
- » DAO Databases – ie. Btrieve, dBase™, FoxPro®, Paradox
- » ODBC Databases – ie. Oracle, SQLServer, Sybase®
- » AnyDoc BROKERit
- » Text Files - fixed or delimited

Available Destination file types:

- » Microsoft Access database .MDB Files
- » DAO Databases – ie. Btrieve, dBase, FoxPro, Paradox
- » ODBC databases – ie. Oracle, SQL Server, Sybase
- » AnyDoc BROKERit
- » Electronic Media Claims NSF
- » Electronic Data Interchange - EDI 835 and 837
- » Text Files - fixed width or delimited
- » XML - Extensible Markup Language

Available Imaging Application destination APIs:

- » Captaris Alchemy
- » EMC/Documentum ApplicationXtender®
- » Computhink ViewWise®
- » DocuWare DocuWare®
- » Westbrook Technologies File Magic®
- » Westbrook Technologies Fortis®
- » IBM® DB2® Content Manager
- » Hummingbird™ Hummingbird Enterprise DM™
- » Hyland OnBase®
- » FileNet Panagon IDM®
- » Adobe® PDF
- » Microsoft® SharePoint Portal®
- » Stellent® Imaging & Business Process Management

"I never thought it would be this easy to process my paper documents..."

"By switching to an automated system, we saw a 60% leap in productivity..."

"Multiple people can access the identical image at the same time..."

"Now the turnaround time for each document...is immediate!"

"Things are running much smoother...thanks to AnyDoc Software."

Complete Line of AnyDoc Software Products

Since 1991, AnyDoc Software has met the data capture and processing needs of thousands of companies worldwide with one core platform. Our current suite of products all operate from that stability and enhanced functionality built on years of experience and innovation. One vendor, every document, no headaches.

Additional Software

- » **OCR for AnyDoc®**
A comprehensive software solution for automatic data capture and processing from business forms. The software eliminates the costs and inaccuracies of manual data entry for thousands of companies worldwide.
www.ocrforydoc.com
- » **AnyDoc®BROKERit™**
Store all of your extracted data and images and perform intelligent queries for quick and effective retrieval.
www.anydocbrokerit.com
- » **AnyDoc®CAPTUREit™**
Easily scan documents from anywhere in the world, perform quality assurance and send images over the Internet to a central location for processing.
www.anydoccaptureit.com
- » **AnyDoc®DESIGNit™**
Professionally design your own forms for printing or for use as a template in OCR for AnyDoc processing.
www.anydocdesignit.com
- » **AnyDoc®EXCHANGEit™**
Easily convert extracted data to a variety of file formats for use among multiple applications. EDI, XML, ASCII and others are all available, as are APIs to leading document management solutions.
www.anydoceexchangeit.com
- » **AnyDoc®MANAGEit™**
Optimize resources and keep your OCR for AnyDoc workflow on track with real-time batch information, graphs and alerts.
